Summary

Full Performance-driven Full-Stack Developer and Computer Science undergraduate specializing in building scalable web ecosystems, real-time architectures, and efficient backend infrastructure. Proficient in JavaScript/TypeScript and Python frameworks, with a proven track record of designing RESTful APIs, managing asynchronous data workflows, and optimizing database schemas for rapid data retrieval.

Technical Skills

Programming & Querying: C++, Python

Frontend Development: ReactJS, HTML5, CSS3, JavaScript (ES6+),

Backend Development: NodeJS, Express.js, Nest.js

Full Stack Development: Next.js, Django

Databases: MongoDB

Projects

Blog Website | MERN Stack

Jan 2025 – March 2025

- Developed a full-stack blog application leveraging the **MERN (MongoDB, Express, React, Node.js) stack** to provide users with a platform for creating, reading, and managing blogs and also added a text editor just like notepad to write beautiful blogs
- Designed and implemented a **RESTful API** using **Node.js** and **Express.js**, including secure user **authentication (JWT)** and CRUD operations for blog posts (create, read, update, delete).
- Built a dynamic and responsive user interface using React and React Router, tailwind CSS, utilizing functional components and hooks for efficient state management.
- Implemented advanced features such as image/file upload (e.g., using Multer), search/filtering functionality, and markdown rendering

Full-Stack Chat Application with Real-Time Messaging | MERN Stack

March 2025 – April 2025

- Designed and deployed a MERN stack application featuring real-time chat functionality for one-to-one communication
- Utilized **WebSocket** on the Node.js/Express server to establish persistent, bidirectional connections, ensuring **instantaneous message delivery**.
- Built a **responsive UI** with React, managing state via Hooks and integrating with a RESTful API for message and user data persistence in MongoDB
- Showcases proficiency in full-stack development, API design, and **real-time architecture**

Full-Stack Music Streaming Platform (Spotify Clone)|MERN Stack

May 2025 –Nov 2025

- Engineered the entire application, utilizing **React.js** for a dynamic, component-based frontend, **Node.js/Express.js** for the RESTful API, and **MongoDB** for flexible data storage.
- **Media Management & Playback:** Developed a custom media player interface using the **HTML5 Audio API** to handle core playback features (play/pause, seek, volume control). **Note:** While full adaptive bitrate streaming was omitted, the focus was on stable, high-quality audio delivery.
- **Data Modeling & Relationships:** Designed a normalized MongoDB schema to efficiently manage complex relationships between **Users, Playlists, Favourite, songs, and Songs**, optimizing query performance for rapid data retrieval.
- **Microservices and Container:** Using microservice architecture and docker for running all the microservices on different port
- **AWS Integration:** Using AWS for storing the songs in s3 bucket and pushing all code to git
- **CI/CD Pipelines:** Created CI/CD Pipelines using git actions for testing and deployment purpose
- Showcases proficiency in full-stack development, API design, and **real-time architecture**

Professional Experience

- **Designing** , **developing** and **maintaining** the RAPS website
- Designed and implemented a **RESTful API** using **Node.js** and **Express.js**, including secure user **authentication (JWT)** and CRUD operations for blog posts (create, read, update, delete).
- Built a dynamic and responsive user interface using React and React Router, tailwind CSS , utilizing functional components and hooks for efficient state management .
- Implemented advanced features such as image/file upload (e.g., using Multer), search/filtering functionality, and markdown rendering

Education

B.Sc. in computer science(Ongoing)

Bk Birla college or Arts Commerce and Science | Expected Graduation : 2028

Awards & Recognitions
